

# PROJECT

## CRUD OPERATION

Follow the basic steps involved in creating a CRUD app in Django:-

- 1- Create an Django Web Application base below hierarchy.
- 2- Create the Model class. This model class is responsible for creation of Table in our Database.
- 3- Create the View logic that we are planning to display to the end user
- 4- Declare and define the URLs which is going to map our view part. This url is responsible to divert the call to specific python class and html page depending on our relam or browser url.
- 5- Create the Templates where we put all our html file that we are planning to display to the end user.i.e. html file.

## CRUDAPP

```
|— BLOG_POSTS
|  |— ADMIN.PY
|  |— APPS.PY
|  |— __INIT__.PY
|  |— MIGRATIONS
|  |— MODELS.PY
|  |— TEMPLATES
|  |  |— BLOG_POSTS
|  |    |— POST_DELETE.HTML
|  |    |— POST_FORM.HTML
|  |    |— POST_LIST.HTML
|  |— TESTS.PY
|  |— URLS.PY
|  |— VIEWS.PY
|— CRUDAPP
|  |— __INIT__.PY
|  |— SETTINGS.PY
|  |— URLS.PY
|  |— VIEWS.PY
|  |— WSGI.PY
|— DB.SQLITE3
|— MANAGE.PY
|— REQUIREMENTS.TXT
```
